

Command Line Interface (CLI)

😊 Datasets provides a command line interface (CLI) with useful shell commands to interact with your dataset.

You can check the available commands:

```
>>> datasets-cli --help
usage: datasets-cli <command> [<args>]

positional arguments:
  {env,test,delete_from_hub}
                                datasets-cli command helpers
  env                        Print relevant system environment info.
  test                       Test dataset loading.
  delete_from_hub           Delete dataset config from the Hub

optional arguments:
  -h, --help                show this help message and exit
```

Delete from Hub

Delete a dataset configuration from a [supported dataset](#) on the Hub.

```
>>> datasets-cli delete_from_hub --help
usage: datasets-cli <command> [<args>] delete_from_hub [-h] [--token TOKEN] [--revision REVISION]

positional arguments:
  dataset_id          source dataset ID, e.g. USERNAME/DATASET_NAME or ORGANIZATION/DATASET_NAME
  config_name         config name to delete

optional arguments:
  -h, --help          show this help message and exit
  --token TOKEN       access token to the Hugging Face Hub
  --revision REVISION source revision
```

For example:

```
>>> datasets-cli delete_from_hub USERNAME/DATASET_NAME CONFIG_NAME
```

[!TIP]

Do not forget that you need to log in first to your Hugging Face account:

```
>>> hf auth login
```
